TaskBrand® Prep-Paint-Finish Wiping System **A Complete Five-Step Solution** *The key to a clean, detailed finished surface*

CLEVELAND—February 7, 2023—
Painting and refinishing is a painstaking, multi-step process that requires attention to detail and quality materials to achieve the desired outcome. The necessary materials extend beyond the coating or paint being applied. The wipers used to clean and decontaminate a surface between steps are critical as well.

Hospeco Brands Group presents
[TaskBrand® Prep, Paint, and Finish Wiping System](#), a prep-to-finish system

that includes all the wiping products needed for each stage of the paint or refinishing process. The method includes five easy-to-follow steps: 1) tack cloth; 2&3) wash and dry prep cloths; 4) static control wipe; and 5) final tack cloth.

[TaskBrand® Essential Tack Cloths](#) effectively remove dirt and sanding dust, leaving a clean, dry surface for paint and stain. This option will be more forgiving for new painters when learning the process and when using waterborne paints. (Also available: [TaskBrand® Original Tack Cloth](#).)

[TaskBrand® Wash & Dry Prep Cloths](#) are large and super-absorbent for superior wipe-dry with waterborne paint and solvents. They are virtually lint-free, silicone free, with no added binders or glue that can contaminate work, and maintain excellent strength whether wet or dry.

[TaskBrand® Static Control Wipes](#) are pre-saturated wipes with 70% isopropyl alcohol and 30% de-ionized water to reduce static charge and minimize attracting dirt. Cleans surfaces thoroughly to lower the risk of paint defects and ideal for moderate temperature and/or humid conditions.

[TaskBrand® Final Tack Cloths](#) remove dust and overspray between coats with virtually no fraying or linting while reducing static buildup on plastic parts and other surfaces. Works well with waterborne paint systems and does not leave residue on hands or surfaces.
